KiwiCall

## Call button for production process optimisation

KiwiCall is a call button designed to eliminate downtime in production lines.

It can be installed on a production line or rack and it allows sending requests automatically and quickly to the nearest free vehicle, up to 1 km away.

Dimensions	diameter 95x38 mm
Power supply	5 - 24 V
Power consumption	3 W

How does it work?

KiwiCall sends the request to KeyTouch as of a customized message.

When the truck driver accepts or rejects the request, a colour coded signal is sent automatically.

Yellow and red indicate a denied request.

Yellow indicates waiting for a response.

Green indicates an accepted request.
